Unlike most other CAD programs, AutoCAD does not come prepackaged with a model or a set of drawings or drawings that are designed to be placed into a model. Rather, it is a 2D CAD program and it is one of the few widely used commercially-sold 2D CAD programs. AutoCAD is generally used in conjunction with 2D vector-based drafting programs, including AutoCAD's former offspring, AutoCAD LT, and cross-platform sibling AutoCAD MEP. One of the most important features of AutoCAD is the ability to create 2D and 3D drawings, together with the ability to convert between the two. CAD visualization AutoCAD and related products support a variety of non-geometry data formats: B-directional text, supports both horizontal and vertical orientations. Includes text wrapping and an option for text justification. B-line, a system for drawing free-form polylines, which enables line data to be manipulated on the drawing canvas or exported in its native format. Lines, curves and arcs, a system for drawing straight lines, curves, and arcs. It has a number of drawing tools to draw lines, curves, and arcs, as well as the ability to edit them, such as creating multiple segments and refining the outline of the arc or curve. It supports polylines, splines, line styles, color schemes, hatch marks, linked objects, and overlapping lines and arcs. Polylines, based on Autodesk Data Transfer Protocol, D-Script, and direct-write APIs. Series, curves, and splines, which can be a combination of lines, arcs, circles, ellipses, or bezier splines. Common interfaces include: 3D architectural drawing, supports standardized models, such as BIM, DIN, IFC, LEED, 4D, ISO, and others. Parametric and prototype design and engineering, supports the creation of geometry, tables, text and other graphical data needed for engineering and construction work. Raster Graphics, (PDF). raster graphics and vector graphics in one file format. 3D representation, the ability to generate a 3D image of a 2D drawing. Uses a variety of different methods, including ray tracing, polygon rendering, and texturing to display 3D images. Views, the ability to visualize portions of a drawing in a window or another drawing.
